

HyperFrames: the 21 built-in skills

Confirmed live in the repo's `skills/` directory and on `skills.sh`, checked 2026-09-28. This matches the count the reel claimed.

Skill	What it does
hyperframes	Core default skill: renders video from HTML compositions with timed DOM elements
hyperframes-core	Technical contract for building one renderable HyperFrames project (composition structure, timing, tracks, validation)
hyperframes-cli	Wraps the full CLI dev loop (init, add, catalog, preview, render, publish, cloud, etc.)
hyperframes-animation	Motion library: rules, blueprints, transitions, techniques, adapters for GSAP/Lottie/Three.js/Anime.js/CSS/WAAPI/TypeGPU
hyperframes-keyframes	Seek-safe 2D/3D keyframe work: punch-ins, zooms, Ken Burns, camera moves, whip handoffs
hyperframes-audio	Mixes audio already placed in a composition: fades, crossfades, gain, ducking, EQ/compression/reverb, automation
hyperframes-creative	Non-animation creative direction: brand/design specs, palettes, typography, narration, beat planning
hyperframes-registry	Searches, installs and wires roughly 400 reusable registry blocks/components (VFX, transitions, data viz) into a composition
hyperframes-studio	Conventions for building/editing a project collaboratively in Studio (timeline layout, review-before-edit)
media-use	Unified resolve/generate/operate/remember system for locating, generating and transforming any media asset
general-video	Authors or edits a custom composition when no specialized workflow fits (brand reels, montages, remixes)
product-launch-video	Turns a product URL, script or brief into a launch/promo video (SaaS promos, feature reveals, demos)
pr-to-video	Turns a GitHub PR (URL, owner/repo#N, or checked-out repo) into a code-change explainer video from the diff/commits
faceless-explainer	Turns text (article, notes, brief) into a faceless explainer video with invented visuals, no footage capture
motion-graphics	Short design-led motion graphic: kinetic typography, stat count-ups, chart hits, logo stings, animated maps/tweets/UI
music-to-video	Turns a music track or mood brief into a beat-synced lyric video, slideshow, or kinetic promo

Skill	What it does
embedded-captions	Adds captions/subtitles to an existing talking-head video without editing the footage
talking-head-recut	Packages an existing talking-head/interview video with timed graphic overlay cards synced to the transcript
slideshow	Produces a navigable deck (not an MP4): slides, fragment reveals, hotspot navigation, presenter mode
figma	Imports Figma work (assets, tokens, components, motion) into a composition
remotion-to-hyperframes	One-way port of an existing Remotion (React) composition's source to HyperFrames HTML

Not part of the 21

- `.agents/skills` (mirrored in `.claude/skills`): 6 small dev-only skills (captions-overlay, changelog-video, cut-the-curve, motion-doctrine, oversized-cursor, seam-craft) used only for maintaining the project's own changelog videos. The changelog-video skill is the one that hardcodes a paid HeyGen voice and requires a HeyGen login with no local fallback.
- The docs "catalog" page lists 150+ prebuilt visual building blocks (carousels, caption styles, charts, transitions). These are components you drop into a composition, not agent skills, and should not be counted alongside the 21.
