

Connect ChatGPT to your apps with Composio: setup guide

Checked 2026-09-28 against Composio's and OpenAI's own pages.

WARNING: do not use connecttoeverything.com. The reel sends you to connecttoeverything.com for a "free account" and a link to paste into ChatGPT. That site is not a Composio site. Composio's own site, docs, blog and GitHub never mention it. It returned no content on three tries, and search engines have indexed no pages from it. Composio's real addresses are all on composio.dev (its MCP link is <https://connect.composio.dev/mcp>). A link pasted into ChatGPT is trusted whatever name you give it. Naming it "Composio" does not make it Composio. Whoever runs that server would get your Gmail (read, send, delete) once you approve it. **If you already did the reel's steps:** remove that connector in ChatGPT. Then go to <https://myaccount.google.com/linkedapps> and remove access for any app you don't recognise. If you typed a password on connecttoeverything.com, change that password.

1. Verdict

- **Composio is real and safe to use directly.** It is a funded company (\$29M raised, per its own blog). Its open-source repo has 30k+ stars, and it posts reports on its own security incidents. Use it through composio.dev or its listing in ChatGPT, never through the reel's site.
- **What the reel gets right:** ChatGPT has a Developer mode for adding custom connectors (MCP servers). Composio gives you one connector that reaches 1,500+ apps. Composio has a free plan, and naming the connector "Composio" is fine.
- **What it oversells or gets wrong:**
 - The site. connecttoeverything.com is not Composio (see the warning above).
 - "Free." Composio is free, but Developer mode needs a paid ChatGPT plan (Plus or above). It does not work on ChatGPT Free.
 - The menu path. The reel says Settings > Plugins > Developer Mode. OpenAI's docs put the toggle at Settings > Security and login.
 - "It finds the recruiters." Composio's LinkedIn tools can't search for people or send messages. Finding recruiters needs a people-search service connected through Composio (Apollo or RocketReach), and each needs its own API key. Apollo's pricing page says API access is on its Custom plans. Gmail can send or draft the emails.
 - The urgency ("deleting this in 24 hours", "don't tell anyone") is a pressure tactic. It tells you nothing about the setup.
- **Which route to use:** the official Composio plugin in ChatGPT (Route A below). Fall back to adding Composio's own MCP link yourself (Route B) only if Route A isn't available on your account.

2. What it costs

Side	Plan	Price	What you get / limit
Composio	Free	\$0, no card, no time limit	100,000 tool calls a month (one search or one email is about one call), unlimited connected apps. It stops at the limit and never bills you.
Composio	Scale	\$29/month	Includes \$29 of usage. Extra calls cost \$0.0003 each. You won't need this for job hunting.
ChatGPT	Free	\$0	No Developer mode, so Route B won't work. Composio's page does not say whether the Route A plugin works on Free.
ChatGPT	Plus	about \$20/month (widely reported; not confirmed on OpenAI's own pricing page)	Cheapest plan with Developer mode. Works on the web only, not in the desktop or phone apps.
People search (optional)	Apollo / RocketReach	Not confirmed	Needed only if you want ChatGPT to <i>find</i> recruiters. Apollo's pricing page says API access is on Custom plans. RocketReach pricing was not checked.
Gmail	Free account	\$0	Up to 500 emails sent per day. Going over blocks sending for 1 to 24 hours.

In short: if you already pay for ChatGPT Plus, the Gmail part is free. The "find recruiters automatically" part probably costs extra through Apollo or RocketReach. Without it, you supply the names and ChatGPT writes the emails.

3. Setup (about 10 minutes, on a computer, at chatgpt.com)

Route A: official Composio plugin (use this first)

1. Make a free Composio account at <https://dashboard.composio.dev/login>. This is Composio's real sign-in page.
2. Open <https://chatgpt.com> in a web browser and sign in.
3. Open Composio's listing in ChatGPT:
https://chatgpt.com/plugins/plugin_asdk_app_6a58503580c08191b78cc5bdaf4eba6e. The link comes from Composio's own guide but could not be opened to check it. If it won't open, go to **Settings > Plugins**, search for "Composio", and click **Install plugin**.
4. When ChatGPT asks you to authenticate, sign in to Composio and click **Allow access**.
5. In a new chat, type `@Composio connect my Gmail`. Composio will give you a sign-in link. Sign in with your Google account and read the permission screen before you accept.

6. Test it with `@Composio list my 5 most recent unread emails`.

If step 3 or 4 fails, or it won't send or draft email, use Route B.

Route B: add Composio's MCP link yourself (needs Plus or above)

1. At <https://chatgpt.com> go to **Settings > Security and login** and turn on **Developer mode**.
2. Go to the plugins screen (<https://chatgpt.com/plugins>, labelled **ChatGPT Plugins** in OpenAI's docs) and click the **+** button. Composio's guide calls this **Settings > Plugins > MCP tab > Add server**. Use whichever your screen shows.
3. Fill in:
 - Name: `Composio`
 - Type (if asked): **Streamable HTTP**
 - URL: `https://connect.composio.dev/mcp`. Type it exactly and use no other URL.
4. Click **Create** (or **Save**). ChatGPT will list the tools it found.
5. Click **Authenticate** on the Composio entry, sign in at Composio, and click **Allow access**.
6. In each new chat, open the **+** menu in the message box, choose **Developer mode**, and tick **Composio**. It is turned on per chat, not permanently.
7. Connect Gmail the same way as Route A, step 5.

Menu names differ between OpenAI's and Composio's pages ("Plugins", "Apps", "Connectors"). The steps are the same whichever name your screen uses.

4. First run: reproduce the reel's recruiter workflow

Connect these apps, and only these:

- **Gmail**, required, to write drafts.
- **Apollo** or **RocketReach**, optional, only if you have an API key and want ChatGPT to find the recruiters. Add the key when Composio asks for it.
- **Skip LinkedIn**. Composio's LinkedIn tools can only post and read stats. They can't search people or send messages. LinkedIn's user agreement also bans bots that add contacts or send messages.

Prompt with Apollo or RocketReach connected (in Route B, turn on Developer mode + Composio for the chat first):

```
@Composio I'm looking for [ROLE] jobs in [CITY / remote].
1. Use Apollo (or RocketReach) to find up to 10 recruiters or talent acquisition people at [COMPANY 1], [COMPANY 2], [COMPANY 3]. Show a table: name, title, company, email, and where the email came from. Then stop and wait for me to confirm the list.
2. For the people I confirm, write a short email from me (under 120 words), specific to their company, using this background: [2-3 lines about you + link to CV/portfolio].
3. Save each email as a Gmail draft. Do NOT send anything.
```

Prompt without a people-search service:

@Composio Here are recruiters I want to contact: [NAME, COMPANY, EMAIL - one per line].
I'm applying for [ROLE]. My background: [2-3 lines + link].
Write each one a short, personal email (under 120 words) and save each as a Gmail draft. Do not send.

Read the drafts in Gmail and send them yourself. That keeps mistakes and wrong addresses out of recruiters' inboxes.

5. Limits and risks

What you are granting:

- **Gmail:** Composio's Gmail connection has about 61 actions, including reading your mail, sending, forwarding, and moving mail to trash. ChatGPT can call any of them while Composio is enabled in a chat.
- **Composio** holds the Google sign-in token (encrypted, per Composio) and refreshes it automatically, so access continues until you revoke it.
- **Any API key** you give it (Apollo, RocketReach) is stored in Composio.

Risks:

- OpenAI calls Developer mode "powerful but dangerous." It names prompt injection (an email or web page carrying hidden instructions), the model making mistakes on write actions, and malicious servers.
- ChatGPT asks for confirmation before write actions by default. Keep that on, and read what it is about to send before you approve.
- Composio has had security incidents (reports dated February 2026, April 2026 and May 2026 on its blog). It discloses them, but it is still one more company holding access to your inbox.

How to revoke (do all three):

1. **ChatGPT:** remove or disable the Composio plugin/app on the plugins screen (<https://chatgpt.com/plugins>). Turn off Developer mode under Settings > Security and login if you used Route B. The exact name of the remove button could not be confirmed.
2. **Composio:** sign in at <https://dashboard.composio.dev/login> and delete the Gmail connection and any API keys. Composio says you can revoke these at any time.
3. **Google:** go to <https://myaccount.google.com/linkedapps>, open **Access to your Google Account**, pick Composio, and choose **Remove access**. Removing the app in ChatGPT alone does not cancel Google's permission.

What won't work as the reel shows:

- No recruiter search through LinkedIn, and no LinkedIn messages.
- No "find recruiters" at all unless you connect a people-search service, which probably costs money.
- Not free unless you already have ChatGPT Plus or above. Route B needs Developer mode, which isn't on Free, and it works in the web browser only.
- Not bulk outreach. Gmail allows 500 sends a day on a free account, and mass cold email can get your account flagged. Keep it to a handful of personal emails.

- Emails pulled from Apollo or RocketReach can be out of date. Check before sending.
