

Tech Companies That Hire Without a Traditional Interview

Built from an Instagram reel by @vee_daily19 (posted September 23, 2026). The reel says Outlier, Mercor, Alignerr, Surge AI and "25+ other" tech companies hire through resume screening, take-home assignments or portfolio review instead of an interview, and offers the full list and a resume template to anyone who comments "TECH". Only **7 companies are actually shown in the video**, as logos or in a reference document the creator scrolls past: Outlier, Mercor, Alignerr, Surge AI, DataAnnotation.tech, Clickworker/UHRS and Invisible Technologies. The "25+" is said and captioned but never shown. The creator also has a free Substack post from the same day with a longer 41-company version of the list (see "Before you apply").

Each entry below was checked against the company's own site. Pay is marked **official** when the company states it, and **reported** when it comes from reviews, search summaries or the reel's own document.

Summary table

Company	What it does	Apply link	Deadline	Does "no interview" hold?
Outlier (by Scale AI)	Recruits subject-matter experts as contractors for human-feedback work on AI models (coding eval, prompt writing, ranking AI answers)	outlier.ai (https://outlier.ai) (dashboard after login: app.outlier.ai/opportunities (https://app.outlier.ai/opportunities))	Rolling, no deadline	Yes - profile plus per-project skill assessment, no live interview
Mercor	Contractor marketplace placing experts (engineers, lawyers, doctors, consultants) into paid AI-training and evaluation work; also has separate salaried staff jobs	mercor.com/experts (https://www.mercor.com/experts/)	Rolling, no deadline	Partly - no human interviewer, but a ~20-minute AI-conducted interview is a real screening step

Company	What it does	Apply link	Deadline	Does "no interview" hold?
Alignerr (by Labelbox)	Marketplace connecting subject-matter experts to paid AI-training and data-labeling tasks	alignerr.com (https://www.alignerr.com/) (steps at alignerr.com/process (https://www.alignerr.com/process))	Rolling, no deadline	Partly - no human HR interview, but some roles add a 15-20 minute AI-led interview, and ID verification is mandatory
Surge AI	Data annotation and RLHF company selling training data and expert raters to AI labs; also has ordinary staff jobs	Consultant track: surgehq.ai/consultant-network (https://surgehq.ai/consultant-network); expert track: surgehq.ai/workforce (https://surgehq.ai/workforce); staff jobs: surgehq.ai/careers (https://surgehq.ai/careers)	Rolling, no deadline	Yes for the consultant and expert contractor tracks; the staff jobs are ordinary jobs and likely use normal interviews
DataAnnotation.tech	Task-based contractor platform for AI training data (coding, medical, legal, finance, language, general annotation); owned by Surge AI	dataannotation.tech (https://www.dataannotation.tech)	Rolling, no deadline	Yes - "Apply, Qualify, Work" flow with a starter assessment, no interview described

Company	What it does	Apply link	Deadline	Does "no interview" hold?
Clickworker / UHRS	Microtask platform (data labeling, surveys, testing, categorization); also gives access to Microsoft's separate UHRS platform	workplace.clickworker.com/en/users/new (https://workplace.clickworker.com/en/users/new/)	Rolling, no deadline	Yes - registration plus a profile quiz and per-task qualification tests
Invisible Technologies	Sells AI training, data annotation, red-teaming and back-office automation to AI labs and enterprises; hires trainers through a freelance network called "Meridial"	Contractor board: job-boards.eu.greenhouse.io/agency (https://job-boards.eu.greenhouse.io/agency); staff board: job-boards.greenhouse.io/invisibletech (https://job-boards.greenhouse.io/invisibletech)	Rolling, no deadline	Yes for freelance AI-trainer roles (online form plus skills assessment); not checked for salaried staff roles, which likely use normal interviews

1. Outlier (by Scale AI)

What it does: Outlier is Scale AI's platform for recruiting subject-matter experts (coders, mathematicians, scientists, writers, linguists) to do human-feedback work on large language models: writing prompts, building grading rubrics, and rating or ranking AI answers. Scale AI says it has onboarded over 900,000 contributors across roughly 50 countries. Workers are independent contractors, not employees.

How to apply: Start at outlier.ai (<https://outlier.ai>), which states it is "operated by Scale AI." The opportunities dashboard, app.outlier.ai/opportunities (<https://app.outlier.ai/opportunities>), only shows content after you sign in, so current openings could not be checked directly. The role types below come from Outlier's own marketing and FAQ pages.

Hiring process: Per Outlier's FAQ: create a profile, import or review your skills, verify your identity through an ID-check tool called Persona, then pass a paid or unpaid qualification assessment for each project. No live human interview.

Roles and eligibility: Project work in coding evaluation, math and STEM reasoning, prompt writing, RLHF ranking and rating, and regional-language (for example Hindi) evaluation. The FAQ asks for at least an associate degree (some projects need a bachelor's, master's or PhD), legal working age in your country, a valid ID, a mobile phone registered in your country of residence, a resume and a LinkedIn profile. Outlier does not sponsor visas; you must confirm you can legally do paid work where you live.

Pay: Official: pay "varies by expertise, project complexity, and location," is shown per project before you accept, and is paid weekly on Tuesdays via PayPal, Airtm or ACH. Reported (the reel's own document): about \$15-30/hr generalist coding, \$50-75/hr senior coding, \$80-180/hr credentialed expert work, \$7-20/hr Indian regional-language projects.

Deadline: Rolling, no deadline. Work is ongoing and project-based.

Notes and red flags: Trustpilot reviews praise reliable weekly pay and flexible hours. Recurring complaints: sudden, unexplained account deactivations with no clear appeal; unpaid onboarding and assessment time that leads nowhere when project queues run dry; disputed quality scores that stick to your profile; unhelpful support. Reddit posts add that changing IP address (a VPN, or working from a different country than you registered in) can get an account flagged. Treat it as side income, not a stable job.

2. Mercor

What it does: Mercor's "Expert Marketplace" recruits professionals (physicians, lawyers, engineers, consultants, generalists) as independent contractors for paid AI-training and evaluation work for AI labs. It also sells AI benchmarking and data-evaluation services to businesses, and separately hires salaried staff (engineering, ops, finance) at mercor.com/careers (<https://mercor.com/careers>), which is a different path from the contractor work.

How to apply: [mercor.com/experts](https://www.mercor.com/experts/) (<https://www.mercor.com/experts/>). The page lists domain categories (Business Operations, Creative, Finance, Healthcare and clinical, Legal, Management consulting, Software Engineering) and states "Average contracted rate \$110/hr." The job listings at work.mercor.com (<https://work.mercor.com/>) only render in a browser, so specific role names, counts and rates seen in search results could not be confirmed.

Hiring process: Per Mercor's [how-to-apply guide](https://talent.docs.mercor.com/how-to/apply) (<https://talent.docs.mercor.com/how-to/apply>): create a profile and upload a resume; complete an assessment (written forms, multiple-choice questions and/or an AI-conducted interview of about 20 minutes, up to 3 attempts, on desktop Chrome with camera and mic; the reel calls it "APEX"); if matched, Mercor invites you to a specific paid project that names the rate, hours and client. There is no human interviewer for most roles, but the AI interview is a real screen. Passed assessments carry over to compatible roles. Work authorization is verified.

Roles and eligibility: The categories above plus a "Generalist Expert" track. Mercor's [supported-countries page](https://www.mercor.com/supported-countries/) (<https://www.mercor.com/supported-countries/>) says it only engages contractors in listed regions (roughly 140+ countries and regions); sanctioned countries are excluded. Roles "typically require undergraduate-level expertise," and many say no prior AI experience is needed; some ask for years of experience or an advanced degree. No minimum age is stated. You work as an independent contractor.

Pay: Official: "Average contracted rate \$110/hr," "\$4M+ daily payouts," weekly payouts via Stripe Connect, with terms set upfront per listing. Reported (search summaries and the reel's document): software engineering \$50-150/hr (to \$175/hr senior); \$60-250/hr depending on domain.

Deadline: Rolling, no deadline. Applicants enter a talent pool and are matched as projects open.

Notes and red flags: Several independent write-ups (not Mercor's own) say Mercor runs very large numbers of AI interviews without saying how many people are actually placed. Many applicants report sitting in the talent pool indefinitely without work or pay. Projects are gigs that end when the client's project ends.

3. Alignerr (by Labelbox)

What it does: Alignerr is a marketplace run by Labelbox that connects subject-matter experts (coders, scientists, linguists, writers) with paid AI-training tasks: labeling, evaluating and generating data used to train AI models. Workers are independent contractors paid via Stripe Connect or PayPal.

How to apply: [alignerr.com](https://www.alignerr.com/) (<https://www.alignerr.com/>) is the sign-up (sign in with Google, upload a resume); the steps are at [alignerr.com/process](https://www.alignerr.com/process) (<https://www.alignerr.com/process>). Labelbox's [jobs page](https://labelbox.com/company/jobs/) (<https://labelbox.com/company/jobs/>) lists a few salaried staff roles tied to "Alignerr Services"; those are separate from the contractor work.

Hiring process: Sign in with Google, upload your resume or LinkedIn, pick skill and domain preferences, apply to projects. Everyone must pass identity verification (phone, then a government ID check through Persona). Some roles add a 15-20 minute AI-conducted interview (branded "Zara") and/or a paid or unpaid domain assessment. Approved applicants sign contractor paperwork, set up billing, and get onboarding and Discord access.

Roles and eligibility: E-commerce data analysis, Arabic and Japanese language work, coding evaluation, creative and prompt writing, general STEM, audio work. The site says it hires "PhDs, researchers, subject matter experts, and experienced professionals," but states no country list, minimum age or formal degree requirement. The reel's document says it accepts applicants from regions other platforms block.

Pay: Official: average about \$80/hr, range roughly \$30-120/hr by role. Reported (the reel's document): "commonly \$20-60/hr with higher bands for specialised skills."

Deadline: Rolling, no deadline.

Notes and red flags: A [third-party article](https://icytales.com/workers-say-alignerr-owes-them-thousands-on-reddit-their-complaints-keep-disappearing/) (<https://icytales.com/workers-say-alignerr-owes-them-thousands-on-reddit-their-complaints-keep-disappearing/>) collecting Reddit and Trustpilot accounts describes workers deactivated after asking about back pay, told the decision is "final," and owed hundreds of dollars. These are unconfirmed complaints. The reel's own document advises keeping your own invoice records.

4. Surge AI

What it does: Surge AI sells human data and RLHF services to AI labs: datasets, custom post-training and labeling runs, and an expert workforce. Founded 2020, San Francisco. Per [Wikipedia](https://en.wikipedia.org/wiki/Surge_AI) (https://en.wikipedia.org/wiki/Surge_AI), it works with about 1 million annotators, reported about \$1.2 billion revenue in 2024, and was reportedly valued at \$15-25 billion in 2025. It owns DataAnnotation.tech, Get Hybrid and Task Up.

How to apply: Three separate paths:

1. Consultant network, surgehq.ai/consultant-network (<https://surgehq.ai/consultant-network>): Finance, Accounting, Healthcare Ops and Coding roles. Each has its own sign-up link (for example the [Finance sign-up form](https://app.surgehq.ai/worker_signup?projects=CS_FIN) (https://app.surgehq.ai/worker_signup?projects=CS_FIN)), and the page says sign-up is managed through the DataAnnotation platform. This is the realistic path for most people.

2. Expert workforce, surgehq.ai/workforce (<https://surgehq.ai/workforce>): highly credentialed contractor roles (for example a journalist role requiring a Pulitzer, National Magazine Award or equivalent; a professor role requiring a post at a top-ranked or Ivy League school). Apply by emailing talent@surgehq.ai with your background and the role name.
3. Staff jobs, surgehq.ai/careers (<https://surgehq.ai/careers>): 60+ salaried roles (research, engineering, operations, sales, finance, marketing). These are ordinary jobs, separate from the gig work.

Hiring process: Consultant network: sign up through the role link, complete a paid assessment, and if accepted move on to paid work. Expert workforce: email application screened on credentials. Neither page describes a live interview. Staff jobs very likely use normal interviews.

Roles and eligibility: The consultant network asks only for day-to-day experience in its four domains; no country, degree or age rule is stated, and the sign-up form accepts non-US phone numbers. Expert roles are credential-gated. All gig work is contractor work.

Pay: Official (consultant network): \$100 for submitting the assessment, \$100 more if accepted, then \$60/hr with flexible hours. Official (workforce): \$200-400/hr for the journalist role shown. Reported: \$250-450/hr for top expert raters ([Self-Made Success review](https://selfmadesuccess.com/surge-ai-review/) (<https://selfmadesuccess.com/surge-ai-review/>)); \$35-50/hr preference annotation and \$70-95/hr senior coding (the creator's Substack post).

Deadline: Rolling, no deadline.

Notes and red flags: A May 2025 class action alleges Surge misclassified annotators as contractors and withheld wages (per Wikipedia). Some workers told the Los Angeles Times they were not paid for parts of onboarding (per the Self-Made Success review). Some projects run on strict timers. Be clear which tier a role is before applying: the \$60/hr consultant path and the credential-gated expert path are very different.

5. DataAnnotation.tech

What it does: A task-based contractor platform for AI training data: coding, medical, legal, finance, language and general annotation. Owned by Surge AI (per Wikipedia and Surge's own consultant-network page).

How to apply: [dataannotation.tech](https://www.dataannotation.tech) (<https://www.dataannotation.tech>). Its "Apply Now" buttons lead to a worker sign-up, and it describes three steps: "Apply," "Qualify," "Work & get paid."

Hiring process: An unpaid starter assessment (writing and reasoning, per the reel's document); pass it and you get task access. No interview is described.

Roles and eligibility: The site says the work suits people "with strong reasoning skills, attention to detail, and subject-matter expertise," with "no coding or technical background needed" for general tasks, plus specialized roles for engineers, data scientists and other professionals; 107 positions were listed. The reel's document warns that "India access is inconsistent" and to check eligibility before spending time on the assessment; the official site does not address this.

Pay: Official: most specialized roles "\$40-150+/hr," language roles "\$25-40/hr," headline "expert rates of up to \$75-125+/hr." Reported (the reel's document): "roughly \$15-45/hr, coding at the top end." The two do not match; the site's own figures are the current ones.

Deadline: Rolling, no deadline.

Notes and red flags: This entry is thinner than the others: the official site was checked, but the platform's own complaint history and country rules were not investigated separately. Wikipedia notes criticism over unclear ownership and unexplained account cancellations. One third-party report (unconfirmed) describes an annotator paid \$800 whose account then disappeared with \$2,869 of unapproved work outstanding.

6. Clickworker / UHRS

What it does: Clickworker is a microtask marketplace that sells data services (collection, labeling, categorization, AI training data, surveys, store checks, app testing) to businesses and pays over 10 million registered workers in 136 countries per task. UHRS (Universal Human Relevance System) is a separate platform owned by Microsoft; Clickworker is one of several vendors that give its users access to UHRS tasks, with UHRS pay going through your Clickworker account ([Clickworker's UHRS article](https://support-workplace.clickworker.com/support/solutions/articles/80000672250-what-is-uhrs-) (<https://support-workplace.clickworker.com/support/solutions/articles/80000672250-what-is-uhrs->)). Workers are freelancers paid per task.

How to apply: workplace.clickworker.com/en/users/new (<https://workplace.clickworker.com/en/users/new/>). A three-step form: name, username, email, password, birthday, country and address, mobile number, native language, and a box confirming "I am of legal age." No ID at sign-up. You need the Clickworker mobile app to access the account afterwards.

Hiring process: No interview. Register, pass a profile quiz and a qualification test for each task type, then take individually assigned microtasks. The client approves each task before you are paid. UHRS needs its own per-task qualifications, and Clickworker says it "has no influence on the workload and type of projects available on UHRS."

Roles and eligibility: AI training data, surveys, store checks, product tagging, app and website testing, list building, categorization, search evaluation. Only stated requirement is legal age. No degree needed.

Pay: Clickworker publishes no rates, only "paid per task directly by us." Reported (review sites and Reddit summaries): \$0.05-3 per task, about \$5-9/hr for efficient workers, sometimes \$10-15/hr; the reel's document says \$2-8/hr.

Deadline: Rolling, no deadline.

Notes and red flags: [Trustpilot](https://www.trustpilot.com/review/clickworker.com) (<https://www.trustpilot.com/review/clickworker.com>) rates it 2.4/5 over 3,178 reviews. Complaints: earnings cut, delayed or withheld over "tracking issues"; accounts suspended or closed without reason, some right after sign-up or after bank details were added; very low pay; disqualification after time already spent; automated support. Treat any earnings as provisional until paid. The reel's own document calls it a fallback only.

7. Invisible Technologies

What it does: Sells AI training, data annotation, red-teaming and back-office automation to enterprises and AI labs; its site claims it has "trained foundation models for >80% of the world's leading AI providers." Trainers work through its freelance network, "Meridial." It also hires salaried staff for its own operations.

How to apply: Trainer roles are on the Meridial board, job-boards.eu.greenhouse.io/agency. (<https://job-boards.eu.greenhouse.io/agency>), which had about 832 open freelance positions when checked. Example: [Training and Development Specialist - Freelance AI Trainer Project](https://job-boards.eu.greenhouse.io/agency) ([https://job-](https://job-boards.eu.greenhouse.io/agency)

boards.eu.greenhouse.io/agency/jobs/4605461101). The staff board, job-boards.greenhouse.io/invisibletech (<https://job-boards.greenhouse.io/invisibletech>), lists only engineering and sales roles.

Hiring process: For trainer roles: an online form (resume, education, a skills assessment, LinkedIn). No interview is stated in the posting. The reel's document agrees: "application, written assessment, sometimes a short async task." Whether staff roles skip interviews was not checked; they likely do not.

Roles and eligibility: The example posting asks for a bachelor's or master's in a relevant field, confirmation of where you live (a US state or a listed country), and your own computer and fast internet; no benefits. Many listings are tied to a country or language (for example "English Language Specialist (US Only)," "Indian Language Fluency Instructors," French-speaking roles for Canada, Belgium, Switzerland and Algeria). No minimum age found.

Pay: Official (example posting): "\$8-\$65 per hour, determined after evaluating qualifications and location." Reported (the reel's document): typically \$15-40/hr.

Deadline: Rolling, no deadline; the posting states none.

Notes and red flags: [Trustpilot](https://fr.trustpilot.com/review/invisibletech.ai) (<https://fr.trustpilot.com/review/invisibletech.ai>) has 10 reviews averaging 2.3/5. Complaints: unpaid multi-hour assessments with no follow-up; accounts deactivated without explanation; valid IDs rejected; one applicant finished months of unpaid onboarding before being told their country (Germany) was not supported; pay said to vary by country. Confirm your country is accepted before doing any unpaid work.

Before you apply

- **Contractor, not employee.** All seven engage gig workers as independent contractors: no employment protections, and you handle your own taxes. Only the separate staff-job pages at Mercor, Surge AI and Invisible Technologies are salaried roles, and those likely have real interviews.
- **"No interview" means a profile plus an assessment.** Instead of a recruiter call you complete a qualification step: a skills test, a paid or unpaid starter assessment, a portfolio review, or (at Mercor and some Alignerr roles) an AI-conducted interview. Passing gets you into a task queue or talent pool, not guaranteed work.
- **Check country and ID rules first.** Mercor publishes a supported-countries list, Invisible's trainer roles are often tied to one country, and the reel's own document flags inconsistent India access at DataAnnotation.tech. Outlier and Alignerr use Persona ID checks, which some people struggle to pass.
- **Unexplained deactivation is the most common complaint** across Outlier, Alignerr, DataAnnotation.tech, Clickworker and Invisible, often with no appeal and sometimes with pay for finished work withheld.
- **Work can dry up.** Queues empty without warning even after you qualify. Treat this as side income.
- **Cap your unpaid time.** Decide in advance how many unpaid assessment or onboarding hours you will spend before walking away.
- **Know who owns the platform.** DataAnnotation.tech belongs to Surge AI; Invisible's trainer work runs under the "Meridial" name.
- **The longer list is free.** The creator (Veeraj Gadda) published ["25 tech companies hiring without traditional interviews"](https://veedaily19.substack.com/p/25-tech-companies-hiring-without-traditional-interviews) (<https://veedaily19.substack.com/p/25-tech-companies-hiring-without-traditional-interviews>) on Substack the same day as the reel, with no paywall. It lists 41 companies with apply links, in sections for AI training, freelance marketplaces, and internships, hackathons and learning platforms. The other 34 companies on it

were not checked here. The resume template is not in the post; that part may still need the "TECH" comment.
