AI career preparation with reproducible projects and resume evidence

Strengths and best use

The combined reels connect preparation and applications. Build a small artifact that demonstrates a requirement, explain the result in language a recruiter can follow, and retain the technical detail an engineer needs to assess the work.

Build evidence for one target role

Collect requirements from a few official postings and map them to demonstrable skills. Use Hugging Face's LLM course (https://huggingface.co/learn/llm-course/chapter1/1), Microsoft's Generative AI for Beginners (https://github.com/microsoft/generative-ai-for-beginners) or Full Stack Deep Learning (https://fullstackdeeplearning.com/llm-bootcamp/) for a specific gap. Compare three projects:

1. RAG with public documents, cited answers and a labeled retrieval set. Report retrieval and answer evaluation separately. Ragas documentation (https://docs.ragas.io/en/stable/)
2. A tool-using agent with scoped permissions, replayable fixtures, a budget and tests for invalid arguments, timeouts and denied actions. Record traces and score task success. LangSmith evaluation (https://docs.langchain.com/langsmith/evaluation)
3. A serving baseline with model and hardware recorded. Compare first-token latency, throughput, errors and cost at a declared load. vLLM quickstart (https://docs.vllm.ai/en/latest/getting_started/quickstart/) - SGLang documentation (https://docs.sglang.io/)

Turn the work into an application

Give each project a concise README, an exact reproduction command, and an observed limitation. Use a project-action-result bullet and tie every number to its baseline and measurement window. Choose section order by relevance to the role. The reel's interview-rate comparison involves different candidates and lacks controlled application data. MIT's resume toolkit (https://capd.mit.edu/resources/career-toolkit-crafting-an-effective-resume/)

Project idea

Keep a short list of roles with official links and evidence for the top requirements. Log each application channel and stage. Review which artifacts people could reproduce and which requirements still lack proof. Compare response rates within similar roles and channels. Ashby referral research (https://www.ashbyhq.com/talent-trends-report/reports/referrals)

Reusable prompt

```
Choose one target role and map each important requirement to evidence I can reproduce. Scope one missing project, define success and a failure test, and draft resume bullets using only the results I supply.
```
