Unslop a screen with hierarchy, contrast, and product evidence

Researched 2026-11-12.

Strengths and best use

The reel's most transferable ideas are to make the main action prominent, show the real product, and group information with spacing. Pair visual changes with readable copy, consistent iconography, and clear loading feedback.

Current checks

The public heydamir/unslop repository contains an independently accessible redesign skill. The reel's message-gated download could not be inspected, so the connection between the two remains unconfirmed. WCAG's AA minimum contrast criterion calls for 4.5:1 for typical text and 3:1 for large text, with defined exceptions. Treat radius and optical alignment heuristics as starting points.

Inspect the public repository

```
git clone https://github.com/heydamir/unslop
```

Sources checked

heydamir/unslop (https://github.com/heydamir/unslop) - WCAG contrast (https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html) - WCAG target size (https://www.w3.org/WAI/WCAG22/Understanding/target-size-minimum.html) - Motion reduced-motion hook (https://motion.dev/docs/react-use-reduced-motion)

Project idea

Choose one screen and identify the user's next action. Revise hierarchy and labels first. Test contrast, focus, zoom and narrow layouts. Capture the same screen and state before and after. For the public skill, inspect its files and scope before copying the skill directory into a project.

Reusable prompt

```
Review this screen against the main user task. Propose three changes to hierarchy, copy and feedback, then record the before and after states and keyboard checks.
```
