Ten employer leads with confirmed engineering openings

Researched 2026-11-12.

Strengths and best use

The reel gives a starting set of employers. Its best use is to open their own boards and shortlist individual roles by location, work arrangement and requirements.

Current checks

On November 12 the ElevenLabs board listed FDE Software Engineer roles in the USA and UK. Both state remote-first within the listed country and mention customer-facing experience from student clubs or side projects as acceptable. Anduril's Dublin early-career posting specifies full-time office work and a July 2027 start. Treat board totals as inventories that include multiple departments and locations.

Project idea

Search the remaining leads by role and location. Capture the role title, posting ID, URL and last checked date. Verify work arrangement from the description. Mark authorization, sponsorship and deadline as unspecified when the employer leaves those fields blank.

Reusable prompt

```
Extract role, location, work arrangement, scope, posted date and application URL from each official listing. Flag unknown requirements and rank roles against the profile I provide.
```
