Five remote-company leads: official careers links and role screening

Researched 2026-11-02.

Five companies, five official starting points

The reel names Supabase, Railway, OpenZeppelin, Circle and RevenueCat as remote-work leads. These are company-discovery resources, not five verified offers or a universal salary range. Current primary pages were checked November 2, 2026. No listings from the separate jobs folder were imported, and no applications were submitted.

Company	Official destination	What this check establishes
Supabase	Careers (https://supabase.com/careers)	Its page describes a remote, asynchronous company and links hiring opportunities
Railway	Careers (https://railway.com/careers)	Its page describes globally distributed work and shows an open-positions section
OpenZeppelin	Careers (https://www.openzeppelin.com/careers)	Its page describes remote-first work in blockchain security
Circle	Careers (https://circle.so/careers)	This is the community-platform company at circle.so, whose page describes a global remote team
RevenueCat	Official job board (https://jobs.ashbyhq.com/revenuecat)	Its careers URL redirects to this JavaScript board; individual role details were not available in the readable fetch

"Remote" at company level does not establish that every job accepts every location, time zone or experience level. The reel's broad compensation and worldwide-access claims should be checked against each live posting. Circle here is not the stablecoin company with a similar name.

Screen an actual role

1. Open the company's official careers page and follow its own posting link. Record the URL and the date checked, since openings change.
2. Read the exact title and scope. Distinguish product engineering, infrastructure, security and customer-facing roles rather than applying to the company name alone.
3. Copy the posting's stated location and time-zone conditions. Leave missing information as unknown; do not infer permission from "remote" in a marketing page.
4. Record experience requirements and compensation only if stated for that role. Do not convert a headline's salary into a universal company band.

5. Match requirements to actual evidence: a relevant project, a clear explanation of decisions and a demonstrable contribution. Apply through the official route after checking the instructions.

Preparation by product area

For Supabase and Railway, a small deployed application with logs, database changes and an operational explanation can demonstrate relevant work. For OpenZeppelin, inspect the role's security and blockchain requirements before choosing a practice task. For Circle, focus on community-product workflows; for RevenueCat, understand subscription lifecycle concepts. These are independent preparation suggestions, not employer interview promises or instructions to use their production systems.

Reusable prompt

```
Compare these official job postings with evidence I supply about my work.
For each role, preserve the original URL and checked date. Extract stated
location, time-zone, experience and compensation conditions without
guessing. Separate supported matches, gaps and questions for a recruiter.
Suggest one small portfolio improvement grounded in real requirements.
Do not invent eligibility, submit an application or contact anyone.
```

Project idea and next step

Build a private role-comparison ledger with official URL, checked date, restrictions, requirements, evidence and next action. Use fictional rows for a public demo. The attached CSV begins empty so it does not masquerade as current vacancies. Start by checking one official posting and writing a short fit assessment; use the combined career-planning tile for the broader preparation and application routine.
