Eleven short courses and what each credential represents

Researched 2026-11-12.

Strengths and best use

The reel collects short introductions across software, networking, marketing, security and finance. A focused selection can help you explore a role before committing to a longer program.

Current checks

Meta currently lists its Advantage+ course at 25 minutes. Microsoft Learn lists a 37-minute module and an assessment pass designation. IBM's Getting Started with Data badge specifies participation through eligible SkillsBuild organizations. Forage lists separate Deloitte and J.P. Morgan simulations. AWS lists the introductory course, with the credential outcome unconfirmed. Treat the reel's universal completion time and occupational pay promises as unverified.

Project idea

Pick two aligned courses and make a small work sample, such as a threat report or a documented data analysis. Check availability, prerequisites, provider terminology and proof. Use public wage statistics to research the occupation separately from your training plan.

Reusable prompt

```
Select two role-relevant resources from this list. Verify eligibility and assessment
requirements, and suggest a work sample that can demonstrate the skills.
```
