AI training and credentials by skill, assessment, and access

Strengths and best use

The reels bring together several credible introductory and applied courses. Choose a route that addresses a real skill gap. Compare course completion, badge criteria, timed assessments and proctored exams using the exact terminology of each provider.

Build an AI agent

Start with Google's introductory microcourse (https://www.skills.google/course_templates/536) or human-agent teams (https://academy.claude.com/courses/building-effective-human-agent-teams). The separate Google AI Professional Certificate (https://grow.google/enroll-certificates/ai-professional-certificate-mid/) has its own enrollment terms.

Choose Claude Code 101 (https://academy.claude.com/courses/claude-code-101) for the coding agent, Claude Platform 101 (https://academy.claude.com/courses/claude-platform-101) for the API, LangChain Python (https://academy.langchain.com/courses/langchain-essentials-python) for coded workflows, or LangSmith Fleet (https://academy.langchain.com/courses/quickstart-agent-builder) for a visual workflow. MongoDB's badge (https://www.credly.com/org/mongodb/badge/building-ai-agents-with-mongodb) specifies completion and a skill check.

Work through Intro to MCP (https://academy.claude.com/courses/introduction-to-model-context-protocol) before MCP Advanced Topics (https://academy.claude.com/courses/model-context-protocol-advanced-topics) if the protocol is new to you. Hugging Face (https://huggingface.co/learn/agents-course/en/unit0/introduction) distinguishes Unit 1 fundamentals from full completion with an assignment and challenge. Microsoft Applied Skills (https://learn.microsoft.com/en-us/credentials/applied-skills/develop-an-agent-with-integrated-tools/) is assessed and expects experience building Foundry agents.

Select a short course by role

Software and infrastructure: Claude Code in Action (https://anthropic.skilljar.com/claude-code-in-action), NVIDIA Academy's SONiC catalog (https://academy.nvidia.com/en/wp-content/uploads/2025/10/NVIDIA_Academy_Courses_Catalog.pdf), Microsoft's 37-minute introduction (https://learn.microsoft.com/en-us/training/modules/fundamentals-generative-ai/), and AWS Skill Builder (https://skillbuilder.aws/search?searchText=introduction-to-generative-ai-art-of-the-possible). The AWS course's credential outcome remains unconfirmed.

Marketing, data and simulations: Meta Advantage+ (https://www.facebookblueprint.com/student/path/253135) lists 25 minutes. IBM Getting Started with Data (https://www.credly.com/org/ibm-skillsbuild/badge/getting-started-with-data) restricts its badge to eligible partner learners. Other options are Salesforce Trailhead (https://trailhead.salesforce.com/content/learn/modules/generative-ai-basics), Simplilearn SkillUp (https://www.simplilearn.com/learn-ai-basics-skillup), Deloitte's cyber simulation (https://www.theforage.com/simulations/deloitte-au/cyber-c1e3) and J.P. Morgan's banking simulation (https://www.theforage.com/simulations/jpmorgan/investment-banking-hkyd).

Project idea

Pick one track and pair two courses with a short work sample. Record enrollment terms, account requirements, lab and project time, credential criteria and proof. Budget API usage separately where needed. For a formal Claude exam, check current eligibility and fees with the partner certification FAQ (https://anthropic-partners.skilljar.com/page/faq-certifications) and Pearson VUE (https://www.pearsonvue.com/us/en/anthropic.html). The reels' salary and universal study-time promises lack evidence.

Reusable prompt

```
Build a dated course plan around one role and work sample. Compare credential types, prerequisites, time and costs. Cite the provider for each assessment and distinguish estimates from measured study time.
```
