App marketing through launch channels and measured activation

Strengths and best use

A small launch can expose onboarding friction while the product is still easy to change. A useful first goal is to see whether the right visitors complete one action that delivers value.

Choose a channel that fits your stage

Show HN (https://news.ycombinator.com/showhn.html) expects something people can try. Product Hunt (https://help.producthunt.com/en/collections/19793093-launch-guide) explains its launch process. Reddit SideProject (https://www.reddit.com/r/SideProject/) and Indie Hackers (https://www.indiehackers.com/) can surface feedback when the post fits the community. Uneed (https://www.uneed.best/how-it-works) lists a free waiting line with scheduling and publication conditions. Check current rules before posting.

Design one comparable test

Give visitors a working demo, a clear intended first action and a short way to report friction. Use a distinct campaign link per channel and keep the landing experience steady. Record eligible visits, completed first actions, useful feedback and return visits. The example app in the reel illustrates a launch. Its distribution outcome is unverified.

Project idea

Run one small community launch. Look at the first week and identify the step where eligible visitors stopped. Fix the highest-confidence friction, then test the same task again. Add search visibility and short-form distribution after the activation flow works, using the Google SEO starter guide (https://developers.google.com/search/docs/fundamentals/seo-starter-guide) for site discoverability.

Reusable prompt

```
Choose one launch channel using its current rules. Specify the first useful action, the measurement window and a way to record actionable feedback and return visits.
```
