AI evaluation work: current platforms, qualification and effective pay

Strengths and best use

AI evaluation work rewards demonstrable domain knowledge, careful instruction following, and defensible judgments. A comparison ledger is useful because screening, task supply, accepted work, and payment differ across platforms. The combined reels are a starting list for current opportunity research, not evidence of guaranteed hiring or earnings.

Use current official entry points

The earlier guide's routes remain useful discovery leads: Outlier (https://outlier.ai/), Mercor (https://www.mercor.com/experts/), Alignerr (https://www.alignerr.com/), Surge (https://surgehq.ai/consultant-network), DataAnnotation (https://www.dataannotation.tech/), Clickworker (https://www.clickworker.com/clickworker/), and Meridial openings (https://job-boards.eu.greenhouse.io/agency), the current route associated with the earlier Invisible reference. This batch adds CrowdGen (https://crowdgen.com/), Mindrift (https://mindrift.ai/), and micro1 experts (https://www.micro1.ai/experts). Confirm the live role and contracting entity before applying.

Toloka's contributor page currently redirects to Mindrift. The official welcome page describes migrated accounts, tasks, and balances. Count those names as a related route when comparing options. micro1 describes an AI interview. The presence of a public entry point establishes a place to investigate; it does not establish an opening in a specific region or subject. Toloka migration (https://mindrift.ai/welcome)

Compare the complete offer

For each live role, record the official URL, checked date, required subject expertise, location constraints, screening steps, stated rate and unit, accepted-work conditions, task availability, payment schedule, and any unresolved terms. Use the specific posting for compensation. The new reel's $3,500 weekly claim needs paid hours, total hours, consistent task supply, and settled receipts before it can support an effective-pay estimate.

Include assessment, training, waiting, administration, rejected work, and rework time. Keep stated hourly rate, paid task time, gross accepted earnings, fees, and received money separate. Follow each task's rules about AI assistance and external tools. Do not infer that an application or assessment creates an ongoing paid assignment.

Demonstrate the relevant skill

Prepare a short, original evaluation sample appropriate to the role. Compare two responses against observable rubric criteria, justify the ranking, check factual claims, and identify ambiguity. Specialized roles may need a coding, mathematics, scientific, language, or professional-domain sample. Preserve confidentiality and use fictional or public material in a portfolio.

Reusable prompt

```
Compare these live official AI-evaluation roles against the skills I supply. Extract
eligibility, screening, rate basis, task supply, acceptance, and payment terms, leaving
missing values unknown. Estimate effective pay only from complete time and settled-payment
records. Suggest an original rubric exercise relevant to each role.
```

Project idea

Build an opportunity comparison and earnings workbook with application, qualification, task, review, and payment states. Use synthetic records in public examples and date every real listing observation.
